

# THE GLEICHEN CALL

VOLUME XXVIII

NO. 16

GLEICHEN, ALBERTA, WEDNESDAY JULY 3, 1935

SUBSCRIPTION \$2.00 PER YEAR

## YOUNG LIBERAL ASSOCIATION FORMED HERE

At a well attended meeting in the Club Room of the Community Hall, Wednesday evening of last week, the Young Liberals of the town and district organized the first Young Liberal Association ever formed in Gleichen.

T. H. Beach, president of the local Liberal Association called the meeting to order, and told those present of the numerous Young Liberal Clubs that had been formed in the province, since the two day Young Liberal convention held in Calgary last spring. After explaining the advantages of these clubs a vote was taken and it was unanimously agreed that a Young Liberal Association be formed.

Harold Beveridge, Young Liberal organizer for Southern Alberta further outlined the principles upon which these clubs were formed and the benefits to be received.

The following slate of officers were elected:

H. Hunter, president.

Bert James, president.

John Cook, secretary.

A keen interest was taken in the selection of the several committees upon whose work will largely depend the success of the Association.

Mr. Vaughn Hampton, Liberal candidate gave the boys their encouragement to make a success of the newly formed Association. He spoke of Liberal principles that were of vital importance to young men.

Mr. W. Clemens, president of the Constituency Liberal Association, spoke of the activities of several Young Liberal Clubs that he had visited.

Jack Wilson, member of the Rockyford Club told of the education and pleasure to be derived from an active interest in Liberal work.

The meeting adjourned until July 9th, when committees will report and a program will be completed.

## THE WEEK AT OTTAWA

(By F. W. Gershaw)

The Grain Bill was introduced in the House and passed the second reading before the House. The country interested in the grain marketing realized just what it called for. Mr. King, while recognizing that some arrangement would need to be made to carry on the work of Mr. McFarland was not sure that the terms of the bill would meet the difficulty and asked to have a committee of the House investigate the situation.

The government was good enough to comply with the request and a committee was set up consisting of three Liberals one C.P.F. and five Conservative members. Mr. Bennett took the chairmanship. The evidence heard was of great importance. Mr. Richardson, Mr. Sidney Smith and others connected with the Winnipeg and Vancouver exchanges gave evidence. Representatives of Pools were also present. The Vancouver people were against setting up a Board through which all grain should be marketed. They said such an organization would route much of the wheat through eastern ports to the loss of the Port of Vancouver. They also said if one Board had complete control there would be a sales resistance set up and the Canadian farmer would not get the best price as buyers would be inclined to purchase wheat from other countries. The Winnipeg men also voiced their opposition to a one hundred per cent pool and had the following constructive suggestion to offer.

They recognized that Mr. McFarland's buying had stabilized the market at first and helped the farmer. Later, however, when he accumulated such huge quantities of wheat it had a depressing effect on the market. They all agreed and strongly urged that this 225 million bushels should be sold gradually as the market would absorb it so that it would not actually come in competition with the corn coming crop.

They said a board of three would not be so likely to make mistakes as a board made up of one man. Also they thought the Government should fix a minimum price for wheat at some figure near the cost of production. If wheat went below that minimum figure and 60c was mentioned, then the Board should buy and without delay, and without ac-

cumulating a large quantity, they should sell as they thought advisable. The Government should stand any loss.

If the price was above this minimum price then the farmer could sell and get full value for his crop without any interim payments as the proposed bill provided for. The farmer would have this minimum price as a cushion. He need not sell for this price if he thought wheat would go higher. He could hold his wheat if he wished on the prospect of it going higher being assured of the minimum price in any case.

This plan has been working in the Argentine and seemed to impress the members of the Committee with its fairness. Of course, the producers of lumber, apples, potatoes, etc., at once advanced their claims for similar help. There are, however, special reasons at the moment why the claims of the wheat producer should be first recognized. As a result of the work of the Committee there will likely be real changes in the Bill.

## PROVINCIAL NEWS

Oil production in Alberta to the end of May was 47,102 barrels, compared with 547,282 barrels for the first five months of 1934.

As a result of special grants made this year by the federal department of agriculture, junior farm club camps will be held at seven exhibitions in Alberta this summer, under the direction of the Alberta department of agriculture and the various exhibition associations. These camps are to be held at Edmonton, Calgary, Lethbridge, Camrose, Vermillion, Vegreville and Red Deer. Already, many applications have been received from farm boys and girls.

Personnel of the Alberta Coal Commission, to probe the whole coal mining situation and conditions surrounding same, will be moved within the next two weeks. Hon. George Healey, Minister of Trade and Industry, announced on Friday. He previously announced that Sir Montague Barlow, noted British engineering authority, would head the commission and would arrive in September to commence inquiry.

Making one of the most important drives in the history of the west in search of oil and gas prospects, four geological survey parties are being sent out from Edmonton this season to map and make structural studies of an area of 40,000 square miles extending east from this area to Battleford, Sask. Dr. G. S. Hume, of Ottawa will have general supervision of the work. One party which will operate near Edmonton will be under Dr. R. L. Rutherford, of the department of geology at the University of Alberta, while Dr. P. S. Warren, also of the department of geology, heads a party that will operate in the Wainwright district. Another party under D. C. H. Crickman, graduate of the University of British Columbia, will cover the Vermilion district, while the fourth under C. O. Hage, of the University of Saskatchewan, has been given the region between Lloydminster and Battleford. Such well-known producing fields as Viking with its extension into the Kinsella area, Fayan, Wainwright, and the new district of Lloydminster will be covered in the season's program which will be carried on until the end of September. Information also will be collected in regard to water wells which were bored particularly when they are in common "horizon".

As a matter of information for tourists, both resident and non-resident, the Public Works Department of the Province is arranging to place signs on all bridges crossing streams of any importance, on main highways throughout the province, conveying information as to the names of the streams. How about the important stream that runs through town?

Canada, the United States, and France are the only countries allowed to ship flour into Belgium. The flour from France is employed solely in making certain kinds of biscuits for re-export and the Canadian and U. S. flour must be used only for making "biscuits," a variety of toast bread, or for re-sale to ships stores.

## SCHEDULE OF SOFT BALL FOR FIRST HALF

Last week's results of the softball games were: Gleichen 19, Meadowbrook 6; Nakam 19, Meadowbrook 8; Battery 6 and Gleichen 5.

The following is the balance of the first half of the softball schedule:

Friday July 5th, Battery at Gleichen.

Sunday July 7th, Nakam at Battery.

Tuesday July 9th, Battery at Meadowbrook.

Thursday July 11th, Meadowbrook at Battery.

Sunday July 14th, Nakam at Gleichen.

The Agrow Trophy will be presented to the winners of the league. At the present time Meadowbrook is defending the cup. Two points are given for each win and one point for a tie game. When any disputes arise the managers and captains of the teams participating will handle such matters and their decisions are final.

## CORRESPONDENCE

Editor Call:

Your correspondent, Mr. Glanbeck, appears to be all dressed up with no place to go.

The fundamental law of industry is that industry must furnish its own supply and demand. The machine, through mass production, has produced an embarrassing abundance of supply, while demand or credit has been delegated to private interests and industry must mark time while the people perish.

The old time parties send up a smoke screen of greed, boards, marketing and credit acts, similar to the NRA in the United States, which after two years had failed with net results of around 30 billion, added national debt and a greatly increased loss.

At world conferences, industry is discussed and examined, supply analyzed and dissected, but demand, like our obligations and sound money is sacred. None but the High Priestly of finance may enter there.

Control of credit is the sovereign right of the state and until it is returned to the state want and privation must increase.

Don't be afraid of the big bad wolf Mr. Glanbeck. Hephurn of Ontario and others are already testing its strength and find it neither as big nor as bad as Mr. Hoadley has pictured it.

Never in the history of Alberta has so much depended on the results of an election. Should we win control of our credit the world's greatest economist has promised to come back and stay with us until poverty and want, relief camps and dole have forever been banished from Alberta.

D. L. McLEOD.

## EDUCATION IN CANADA

The steady march of broadening opportunities is characteristic of the educational system of Canada. Not only are institutions of higher learning being expanded and strengthened. The broad base of general knowledge in the primary and secondary schools of the Dominion is being enlarged. If the span of the school year is taken as a measure of educational opportunity the Canadian child of today is given a chance of cultivating his intelligence almost half as great again as was provided for his parents.

The part played by the Canadian school as a social factor in the community is the subject of a special bulletin issued by the Dominion Bureau of Statistics, in which the results of the last census bearing on this phase of national life are brought together. An earlier bulletin developed the fact that schools and universities in Canada claim about 3.5 per cent of the national expenditure, and this may be considered as an indication of their importance in the economic life of the country. Their weight as a social factor cannot be readily represented statistically, but a number of pertinent considerations are presented. No other occupational activity in the life

of the country claims the daily attendance of so many persons. Each year sees one-fourth of the population of Canada appearing in the classroom as either pupil or teacher. There are twice as many school children as there are farmers, and as many as there are men in all other occupations combined.

Each decennial census of the Dominion ascertains the number of children who attend school during the school year and the number of months attended by each. From this information it is possible to calculate the amount of schooling being received by the average child. For almost ten years of his life the Canadian child of today goes to school. If his actual attendance in months is considered, counting ten months as a school year, he receives eight and a half years of schooling, or about half as much again as his parents.

Conditions in 1931 (the last census) would produce an attendance for the average child throughout Canada of 8.55 years—almost one year more than 1921, and two years more than 1911. Since one of the years represents ten months of attendance it is probably about the length of time required to cover a school grade, and the average number of grades covered by a child in 1931 would accordingly be about 8.5 as compared with 6.5 in 1911, except that there was probably more retardation in the earlier year. In order to obtain this amount of schooling, it was about ten years (1931) from the time that the child of 1921 started school until he left, as compared with about eight years (1911) for the child of 1911.

As well as an absolute change of two years in the amount of schooling there has been a considerable relative shifting of positions among the provinces. In two years ago schooling was shortest in the western provinces, especially Saskatchewan and Alberta, the two in process of most rapid settlement. Among the older provinces there was not a great deal of difference, all showing between 6.7 and 7.0 years, except New Brunswick (6.48). In the twenty years following 1911 the western provinces overtook the others in average length of schooling, in spite of the fact that the older provinces went continually ahead. In Alberta this moment increasing the average schooling by nearly four years. In 1931 Quebec and New Brunswick were the only provinces not exceeding eight years, and each of these provinces had registered a gain of more than a year. The prairie provinces and the other two maritime provinces at the same date show between eight and nine years; Ontario and British Columbia over nine years.

It is true of course, the bulletin points out, that during the years the Canadian child is at school, many more of his waking hours are spent out of school than in and that in these hours, as also during the night or seven years before he starts school, his home is likely to be the dominant factor in his life. As a formative influence the school can hardly be expected to approach the weight of the home. But in relation to other influences its weight is heavy. If from the time he starts school he spends an hour and a half weekly in church at the theatre, at the athletic stadium, reading the daily press, or listening to the radio, the young Canadian of today will have to live to the age of ninety years to spend as much time with anyone of these as he spends in school. Moreover, the time (like the time in his parental home) is concentrated in his earlier and more impressionable years.

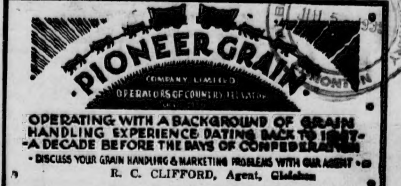

Canadian ice cream by law must contain not less than 10 per cent of milk fat and no other kind of fat must be employed in its manufacture.

Canadian and other Empire wheats are admitted free into the British Isles while wheat of foreign origin is dutiable under the Ottawa Agreement Act at a rate of two shillings (48 cents) per quarter of 48 pounds.

Teacher: "If I take a potatoe and divide it into two parts, then into four, and each of the four parts into two parts, what would I have?" Little boy: "Potatoe salad."

With a feeling of considerable relief, we learn from a medical publication column that hair-dyes do not affect the brain, if any.

Well insulated: "I wonder why it

SAVE

WE'VE heard a lot of that word "save" in the past few years. For some time now the question of saving our pennies and dimes has not only been important—but imperative.

Also, it may be noted that everyone who is in the business of selling merchandise to the public has devoted his attention to pointing out how much you, the customer, can SAVE by dealing with him, to the exclusion of others. Which is perfectly all right, too, in its way, except that it is advisable for a customer in his own interests to be sure that the savings that he is getting are real and not simply over-enthusiasm on the advertiser's part. In other words to save where it's SAFE to save—to save, for instance, at EATON'S, where value means not simply cheapness—but quality at a price—and where every claim regarding merchandise is backed by an iron-clad guarantee of satisfaction that makes every purchase doubly safe. It's natural to want to save—but it's wise to remember that it's SAFE to save at EATON'S.

Quit depending on your old tires. Be sure of your tires by changing to Goodyear's new G3. It's Canada's popular tire!

**HOW TO MAKE ICED TEA**  
 Infuse six heaping teaspoons of Salsal Black Tea in a pint of fresh boiling water. After six minutes strain liquid into two-quart container. While hot, add 1 1/2 cups of granulated sugar and the juice of 2 lemons. Stir well until sugar is dissolved. Fill container with cold water. Do not allow tea to cool before adding the cold water; otherwise liquid will become cloudy. Serve with chilled ice.

# "SALSAL" ICED TEA

## Protect Wild Life

This is an age of organization. Men and women, boys and girls, band themselves together in clubs, associations, unions, large or small, some single isolated groups, others as branches of a Provincial, Dominion, or international body. There are clubs to promote almost every conceivable thing, or object, in which mankind can possibly be interested. Their number is legion, and new organizations spring into existence almost every week.

Many organizations have been in existence for a long time, have large memberships, and very definite objects to serve. They have long occupied a useful and honorable place in our democracy, command the respect of all, and have made worthwhile contributions to society as a whole. Members of such bodies are banded together, as a rule, in support of some great principle to which they are intensely devoted.

There are other organizations which come into being under the stress of temporarily prevailing conditions, and when those conditions change and pass away, these organizations pass out of existence, some having exerted a beneficial influence in the direction of reform and progress; others leaving little but a trail of disillusionment and loss behind them.

It would be impossible to even list, let alone classify, the organizations now in existence making appeal for the support of the public, and it is not the intention of this article to make any such attempt. Rather at this time it is proposed to direct attention to one particular organization, to which no great publicity has been given in past years, but which has been engaged in quietly, but none the less effectively, promoting a cause in which the people of Canada ought to take a very keen and active interest. On former occasions the attention of readers of this column has been drawn to other worthwhile organizations, consequently in now singling out one specific organization for a word of commendation we are making no new departure.

The organization now referred to—possibly we should refer to it in the plural and say organizations—are the Fish and Game clubs or leagues of the various provinces. These organizations are province-wide, not confined to sportsmen alone, but wide open to the naturalist and all lovers of wild life, whether they hunt with a gun or a camera or the notebook of the scientist, for, in the final analysis, the interests of these are common to all.

The objects of these organizations are to promote wild life research; by an educational campaign to instill into the minds of people the cardinal rules and laws of nature and the necessity of giving to nature the assistance of the human element, where necessary, in order that the happiness which comes from plenty can continue to exist; to secure the passage of the necessary laws to prevent extinction of declining species and to ensure the right observance of those laws; to endeavor to maintain the necessary surface water supply, natural cover, trees and food conducive to a bountiful supply of useful wild life, and to control or eliminate those of its enemies which threaten its continued existence.

From this abbreviated outline of objects it will be seen that, in promoting them, these organizations are likewise promoting the welfare of all, irrespective of whether they are directly interested in the preservation of wild bird and animal or not. For example, agriculturists and livestock men, in recent years, have seen the wisdom and necessity of conserving surface water supplies brought close home to them. Equally so, in the wisdom and necessity of protecting trees from wholesale destruction in order that one of the main sources of surface water supplies should not likewise be destroyed.

As a people we have devoted far too little thought and study to the many forces and factors nicely balanced by nature to make this world a habitable, productive and beautiful land, and we have proceeded in our ignorance to do many things which have worked to our own injury with dire results and at a tremendous cost and enormous loss to ourselves and our country. We must work with nature with knowledge and understanding, not in direct opposition to nature, if we are to survive and prosper.

Apart, therefore from the attractiveness which an abundance and great variety of wild animal, bird and fish life gives to any country, the natural conditions which make such wild life possible are likewise the conditions which give beauty to a country and provide what may be regarded as the basic foundation upon which the productivity of the land rests, for without water and natural shelter the land would become a desert.

For these reasons, among others, Canadians should support organizations like the Fish and Game Clubs, if not by enrollment as active members therein, at least by extending their sympathy, support, and co-operation in achieving the objects for which such organizations exist. In a word, every Canadian should be a protector of Canada's wild life, and alert and ready to assist in maintaining those natural conditions which alone make wild life possible.

### Must Import Grain

**Manchuria Will Require Extra Supplies To Feed Population**  
 For the first time in many years, Manchuria will, this year, have to import grain in order to keep its own 30,000,000 people fed.

Because of lack of rain, it is feared that this year's crops of millet and other grains will be a failure, except in favored districts, and already the government of Manchukuo has made arrangements to import 50,000 tons of rice from Saigon, Haiphong and Bangkok. Additional large purchases are contemplated.

The people of Manchuria are not rice eaters, like the Chinese farther south. They subsist normally upon mostly millet and kaoliang, a species of maize.

### Shorter Men For Army

**British Regulations Fix Minimum Height For Infantry At Five Feet, Two Inches**

The British army is to be shorter. Recruiting regulations issued recently fix the minimum height for infantry at five feet two inches. This is two inches below the old minimum. Cavalry of the line, tank corps, Royal Engineers, army ordinance corps may all accept recruits one inch below the minimum previously stipulated, provided they are otherwise fit.

The war office is determined, in view of the dearth of recruits, to bring the army up to full establishment.

The larger a girl happens to be, the longer its life span.

### Latest Method Detects

#### Fingerprints On Cloth

**Will Preserve Them Indefinitely After They Are Found**

A new technique capable of developing fingerprints left on cloth—much as a snaphop negative is developed—has been added to the New York police department's bag of tricks. The method, an indirect product of the Hauptmann case, includes the important accomplishment of preserving the original prints after they are found. Chemical baths bring out and fix the prints.

Shortly after the Lindbergh baby was kidnapped, Dr. Erasmus M. Hudson, a specialist in body chemistry who makes fingerprints a hobby, was called to Hopewell, N.J., to examine the ladder used in the crime.

Using an iodine gas process, he found 500 prints where police had found none with the old powder-dusting method. Incidentally, none of the prints was identified.

Dr. Hudson was invited to direct the New York police department's crime-fighting research in this field. The successful use of silver nitrate solutions on bleached linen and other cloths of light shade, and calcium sulphide on darker fabrics, followed.

The treatment brings chemical transformation of body salts in the wax of which fingerprints are made, causing the tiny lines to become apparent to the eye. The prints may be several years old.

The new technique is superior to the currently widespread method of dusting suspected surfaces with colored powder, it was said, because the powder-dusting is effective only when the wax is fresh.

### Strange Inventions

**Weird Array Of Gadgets At Chicago Congress**

Termed by their own president as "nuts," the gadgeteers of the 13rd annual national inventors congress brought to Chicago a strange array of thingamajigs, hotmainsies and doodads.

Among things which attracted spectators who viewed the exhibits of 700 inventors and 3,500 manufacturers and distributors were "bulbly bassinet," a pneumatic ladder, and a hen's nest which separates layers from liars.

If biddy lays an egg she automatically releases a latch which allows her to stroll out into the yard where the layers rook. No eggs? The only door open to biddy is the one which permits her to enter another yard which had, bad men come to gather chickens for market.

"Many inventors are nuts like I am," said Albert G. Burns, of Oakland, Cal., president of the congress. "But don't forget it's the nuts who generate ideas which develop into inventions."

In the home life sector also was the "bulbly bassinet," which at the turn of an electric switch, provides remote control rocking for baby.

### Grading Garnet Wheat

**To Indemnify Grain Elevators For Loss Sustained**

An appropriation of \$1,500,000 appeared in supplementary estimates tabled in the House of Commons, to indemnify grain elevators which may suffer loss through the separate grading of Garnet wheat. The change in grading is to come into force on August 1, 1935, and the regulation was effected in an amendment to the Canada Grain Act passed last year.

Supplementary estimates amounting to \$19,355,978 were introduced by Finance Minister E. N. Rhodes. Outside of additional appropriations for public works, the department securing the largest vote is national defence, for which more than \$3,000,000 is asked.

### Battles With Reptile

**Noted Traveller Secures Fine Specimen Of King Cobra**

Lawrence T. Griswold, noted anthropologist who has headed a number of expeditions for the Smithsonian Institute and National Zoological Park of Washington, D.C., recently with a fine specimen of the king cobra, which, he said, nearly took his life.

One night in the Philippine Islands Griswold awakened suddenly to find the giant cobra ready to strike. He diverted its attention by throwing a blanket and then with other members of the party killed it. The reptile measured better than 10 feet in length.

Cummings museum, London, contains an elaborate display of witches' remedies collected from Londoners in the last few years.

### Airport Now Obsolete

**Thousands Of Dollars Being Spent On Alterations At Croydon**

Improvements and extensions costing thousands of dollars are being made to Croydon Aerodrome to cope with the growth in air traffic.

When Croydon was equipped as a main airport at a cost of \$1,500,000 in 1928, it was considered adequate for all London's air services for many years to come.

Since then passenger and goods traffic has increased by over 300 per cent, and air lines radiate to all parts of Europe, the Empire and South America.

In seven years the airport has become too small for its job, although nearly all the home airlines have been transferred to Heston and Essex airports.

The lay-out of the buildings is to be altered and extended to speed up the examination of baggage and passports. Passengers who have flown from Paris in one and a half hours are sometimes held up for 20 minutes for this inspection.

When the alterations are completed in two months passports will be inspected while baggage is unloaded from the airliner.

Methods of simplifying the loading and unloading of baggage to and from motor coaches will be used.

### An Interesting Exhibit

**Development Of Transportation Shown In Many Working Models**

From a chariot of ancient Rome, the development, up to the present day, of transportation on land, on sea and in the air, was depicted in a transportation exposition at Saint John, N.B.

Hundreds of working models showed the growth of all means of transportation from the crude vehicle of long-ago to the vastly improved and more beautiful machines of to-day.

A feature of the indoor exhibit was a miniature display of Saint John river and part of the harbor with tiny ships anchored within, and a group of 74 pictures of sailing vessels famous in the early days of Saint John.

At Union station the latest steam-locomotives were on exhibition in their "Sunday best" white at Saint John airport, a fleet of Canada's speediest and most up-to-date seaplanes was shown.

### South Pole Tourist Trade

**May Be Winter Sports Playground For Australians In Future**

The South Pole, or rather the great ice barrier 700 miles this side of it, is envisioned as the winter sports playground of Australians of the future.

The pole is about 3,100 miles from Melbourne and the barrier 2,400 miles. The imaginative with an eye on the development of safe long-distance air travel, see the tourist of the coming day indulging in snow sports under the shadow of the active volcanoes of Erebus and Terror hunting seal, catching penguins, going kayaking among the bergs and making short morning sled trips "into the blue."

Sir Douglas Mawson, Australian polar explorer, especially has been seeking prospects for development of the Antarctic, including possibilities of initiating a seal fur trade, canning of penguin eggs and the opening of a winter sports ground.

### Glider Flied Up Wireless

Wireless messages were received in a glider over Dunstable in mail week for the first time in England. Mr. G. E. Collins, who holds the British distance gliding record, made the experiment, and he said afterwards that it was highly satisfactory.

"Solomon," said Mr. Isaacs to his son. "I have decided to insure your life."

Solomon looked up piteously. "Father," he said, "I'm sure I burn."

### BACKACHE

IF you have backache, aches, dizzy spells, headaches, do not neglect your kidneys. Take Gin Pills for prompt relief at the first sign of these symptoms. You will feel better, look better—be better, if your kidneys are functioning properly.

**GIN PILLS**  
 FOR THE KIDNEYS

### Wants Damages

**Moore Smashes Automobile And Owner Wants \$10,000 From Government To Pay**

Last fall a bull moose ran into his automobile and went off with the radiator shell and a headlight rim, and now Amey Gravelle, of Nainville, wants the Ontario government to pay for it. He has made formal claim to the department of game and fisheries.

Gravelle said he and a companion were driving a car filled with blankets into a new lumber camp in the Glendale Crown game reserve, north of Saint John, N.B.

A turn in the road brought them face to face with the bull moose. As the car went forward the moose attacked. The first smash sent the license plate into the bush. The second sent a foot off the radiator shell and half a fender. Gravelle and his companion were frantic as they tried to hold their seats in the car.

### Will Is Read Today

**Has Claimed Public Attention Since Probation In 1913**

There are doubtless older testaments in the vaults of the Registrar's Office, London, but none which so periodically claims public attention as that of Henry Clucker, probated in 1913, which must be read at Wren Church of St. Magnus the Martyr, Lower Thames Street, whenever a descendant of one of the original beneficiaries wishes to dispose of the property inherited. In the very nature of things the petitions for reading have become more numerous as time has passed, so that one reading a year takes place, and at every reading, according to the terms of the will, the executors, the Worshipful Company of Coopers, and the Master and Wardens must put in an attendance.

### Aerial Photography

**New Camera To Take Panoramic Views From The Air**

An invention which may revolutionize aerial photography has been perfected by an optical firm in Germany, it was announced.

The new camera, designed to take panoramic views from the air, is equipped with eight lenses whose combined range embraces the entire terrain at all points of the compass. At an altitude of 15,000 feet it is possible to photograph an area of 220 square miles, the manufacturers claimed.

### Named By Roosevelt

It was President Roosevelt who first designated it as the White House on his official stationery. T. R. pointed out that nearly every State had an executive mansion (by which term the White House had previously been known) and that the President's home should bear a more distinctive name.

### Used For Centuries

The Mohammedan lunar year of 354 days is a creation which corresponds to nothing in nature, says an Egyptologist, yet this lumping calendar system has been used for 1,315 years—or, as a Mohammedan would count it, 1,354 years.

### Work Is Recognized

**Two Westerners Honored At Meeting Of Canadian Seed Growers' Association**

As recognition of their outstanding work as seed producers, R. D. Kirkham, Saltcoats, Sask., and W. D. Lang, Cawston, B.C., were made honorary life members of the Canadian Seed Growers' Association, in convention at Edmonton. Further honor was conferred when the two growers were made "Robertson associates" of the organization, a distinction commemorative of Jas. W. Robertson, former Dominion agricultural commissioner.

Mr. Lang has been active in the association for 19 years and Mr. Kirkham for 20 years, during which time the latter has done important work in the purification of Marquis wheat. Bronze medals will be presented later.

### May Take Pets On Train

**New Rules For Passengers Using Sleeping Car Drawing Rooms Or Compartments**

Animal lovers may take their pets with them, and not leave them at home or crate them when travelling on trains, it was learned.

The Canadian National Railway, the Canadian Pacific and the Pullman Company announced patrons of sleeping car drawing rooms or compartments might take with them, dogs, cats or small animals, or birds, as long as they were not vicious or objectionable. But they must be in suitable containers.

The privilege does not apply to passengers occupying space in the body of the car, and the pets will not be allowed outside of their masters' rooms.

### Had To Think Quickly

A barrister who was sometimes forgetful, having been engaged to plead the cause of an offender, began by saying: "I know the prisoner at the bar, and he bears the character of being a most consummate and impudent scoundrel."

Here somebody whispered to him that the prisoner was his client, whereupon he continued: "But what great and good man ever lived who was not incriminated by many of his contemporaries?"

The song sparrow has about 2,500 feathers.

## WORRIED ABOUT YOUR HEALTH?

**Let SASKASAL regain and maintain it**

Nature gives to Canada in magnificent abundance the natural Mineral Salts found in Little Manitou. These health-giving Salts are recovered and refined by expert Chemists in the form of SASKASAL SALTS. Thus SASKASAL in turn gives to Canadians in simple form—easy and pleasant to take—a valuable tonic in regaining your lost health and maintaining it in joyous vigor. If you suffer from Constipation, Indigestion, Rheumatism, Kidney or Liver troubles—take SASKASAL. At All Drug Stores—50c.

## A WORLD OF FLAVOR

## New Police Methods

### Learn While You Sleep

#### Twilight Sleep Potion Might Take Place Of Third Degree

You can put it down in your little red book right now that the time is coming when every finger print in Canada and United States will be kept on record by a bureau of registration and identification. You can take the word of Sanford Bates, director, bureau of prisons, department of justice, Washington, for it.

Not only that, but he said that a newly concocted twilight sleep potion would take the place of police third degree methods. Lie detectors would break down criminals. Magnets would detect concealed weapons. Prisons would be guarded by a sentry man, who, by means of electric devices, would know the movement of every man in the prison. Police dogs would replace men. Prison bars would be saw-proof. Babies' cries would be protected by a system of alarm which would prevent kidnapping.

But let Mr. Bates tell his own story.

In the files of the bureau of registration and identification, Washington, tucked away in drawers, there are the finger-prints of four and a half million persons. "And there are not two of them identical," Mr. Bates said. "There never have been. The time is coming when every person in United States and Canada will have their finger-prints registered. Even the Dionne quintuplets."

"Why," demanded Mr. Bates, "do police officials continue the brutal third degree method when there is at our command a system of humane third degree?" It is used by some police departments, but is almost refused by others. It is a twilight sleep potion. You put the criminal under its influence and ask him questions and he can't help telling the truth. It's all very simple."

There would be no more possibility of getting away with a lie if the "lie detector" was in wider use, he said. "I've been examined under this apparatus," Mr. Bates said, "and I don't recommend it to anyone with anything to hide."

You'll never be able to carry saws or guns into prisons if every prisoner is equipped with the new magnetizer, Mr. Bates predicted. Some prisons already have, the apparatus installed. "One man tried to take a saw into prison between the soles of his shoes, and the magnetizer detected it and rang an alarm," he related.

#### Unlucky Sports Fan

Sammy Hill is just about the busiest bootblack in San Francisco—and the saddest. He bet 2,245 shoes shines at odds of 26-to-1. That Max Baer would beat James Braddock in their heavyweight fight. Now the successful Braddock winners are collecting with a vengeance.

## QUIVERING NERVES

When you are just on edge . . . when you can't stand the children's noise . . . when everything you do is a burden . . . when you are irritable and blue . . . try Lydia E. Pinkham's Vegetable Compound. 98 out of 100 women report benefit.

It will give you just the extra energy you need. Life will seem worth living again.

Don't endure another day without the help this medicine can give. Get a bottle from your druggist today.

Lydia E. Pinkham's  
VEGETABLE COMPOUND

## Lindbergh Aids Science

Completes Experiment Where Doctors For 125 Years Have Failed. Col. Charles A. Lindbergh, turned scientist, has made an artificial heart and lungs at the Rockefeller Institute, bringing to success a century-long quest of medicine to cause whole parts of the body to live indefinitely and even grow in glass chambers, where they are placed and revived after surgical death.

The new achievement has nothing to do with the old tissue culture, the announcement explains.

Whole organs not only live but grow. They offer a new field of discovering the nature of disease and its cure. Its internal cause directly visible under the scientist's eye.

Twenty-six times, the announcement states, the new Lindbergh pump has worked successfully. Spleens, hearts, kidneys, thyroids, ovaries and suprarenal glands were revived, lived indefinitely. They were taken from animals an hour after they had died of death.

For 125 years this has been attempted. Of late there had been some temporary success. The organs lived a while. But infection, which got into them in their artificial houses the same as in living bodies, cut their after-life short. The Lindbergh pump solves this problem, being so mechanically perfect no infection enters.

The pump, an artificial heart and lungs combined, is not described. At the institute information about it was refused with the statement it will be divulged later in the institute's own publications.

However, the announcement reveals Lindbergh made the first step in 1931, and he was the author of an unsigned announcement then in science describing a new apparatus made at the institute's division of experimental surgery. The picture, then published, shows an amazingly simple gadget of glass. It illustrates dramatically the mechanical genius, which is Col. Lindbergh's contribution to the Rockefeller scientists.

It is a glass coil, set on a table which both rotates and rocks. Result: the top of the coil arcs like a Roman candle. And the fluid in the coil thereby circulates, in a completely closed system, without any pumps or joints.

It is also a lung. For air is forced into the coils desired while it whirls. This first heart and lungs failed to do the work required. Several changes have been made. The successful one was made this year and the institute's manager said it is quite different from the first.

## Attempt To Scale Peak

Alpinists From United States To Begin Assault On Mighty Monarch Of B.C. Coast Range

Mount Washington's "last summit" was the goal of eight intrepid United States Alpinists who took off from Vancouver recently in two seaplanes for Knight inlet, from where they will attempt to scale the virgin peak. Members of the Sierra Club of California form the party which will attempt to conquer the defiant "man-killer" which last year claimed the life of Alec H. Dalglish of Vancouver, who fell from the treacherous ridge below the summit as he and two others attempted to reach the 13,260-foot peak.

In the party are Beator Robinson and Richard M. Leonard, Oakland, Calif., attorneys; Jules M. Eichorn, University of California student; William E. Loomis of Boston, Harvard University student; John Reigluth, San Francisco; Don M. Woods, San Jose, Calif., teacher; Bob Ratcliffe and David R. Brower, Berkeley, Calif.

From Knight inlet, the mountaineers will back-pack supplies over the 30-mile-long Franklin glacier to Washington's base. They hope to establish a base camp at the 11,000-foot level and from there begin the assault on the mighty monarch of British Columbia's coast range.

## A Valuable Stamp

A 12-cent, 1861 United States stamp of romantic history brought \$525 (about \$2,563) at an auction at Harpers, Bond street, London. The stamp was smuggled out of Russia by its owner, Prince Olshansky, who stitched it into the lining of his coat. Apparently forgetting about the stamp, the prince gave the coat to an impoverished countryman who, in having the coat turned, discovered the stamp. Eventually it found its way to the auction room.

The American Indian does not belong to a beardless race. Most male Indians could grow a mustache and beard, if they did not pluck out all facial hairs by the roots.

## Our Debt To The World

It Of More Importance Than Its Debt To Us

Commencement exercises produced the usual crop of advice, exhortation and oratory. Seldom do they produce a passage as sensible or as challenging as that which Mr. Owen D. Young, the great liberal American industrialist, spoke to the students of Marietta College. Thus: "It is not what the world owes you but what you owe the world, that is the guiding principle if the world is to be a place worth living in at all."

It would be a good thing if these words could be read and pondered by every young man and young woman setting out on life's journey. For they are words of advice which many of our young people seem pitifully unaware of, and which many elders seem to have forgotten. What is emphasized, and what all too many of us seem to have in our minds, is what the world owes us. Day after day we read and hear about how the world owes a man this, that or the other thing, nearly always without the qualification that no man can be owed more than he tries to deserve.

Yet the qualification is the important thing. Actually, the world doesn't owe any man more than his own efforts and sense of duty and responsibility entitle him to. The notion that we are here to share in good things for which we needn't strive, that it's the responsibility of somebody or some scheme of things to care for us, is as fallacious as it is pernicious. The world has never been like that—and never will be.—Ottawa Journal.

## Seems To Prove Claim

Officials Have Names Of Illicit Drug Peddlers In China

The charge, often made by Chinese, to the effect that foreign drug peddlers are filling the demilitarized zone north of Peking with opium, heroin and morphine, seems to be substantiated by reports from missionaries.

Mrs. Muriel Lester, founder of the famous Kingsley Hall settlement house, East London, has just returned to Peking from a stay with missionaries in Changchi county, about 600 square miles in extent, and a population estimated at 400,000.

In this area there are to-day, according to Miss Lester, 183 shops called "Yang Hang," or "foreign arms," which are openly engaged in the sale of opium, morphine or heroin. An official list of these firms, given to her by missionary friends in Changchi, gives the names of all these shops, and the names and nationalities of the owners. Of the total, 47 are owned by Koreans, and the rest, or 116, are owned by Japanese. Most of the employees are Chinese.

## Opening Rubber Factory

One of the newest industrial plants in Soviet Armenia is being opened at the foot of the ancient mountains of Ararat. It will produce synthetic rubber, and has been under construction for three years. One unit has started operations. It is estimated that \$240,000 will be spent in further construction this year.

## Restrictions Were Lifted

British Soldier Allowed Out Of Detention Barracks For His Wedding

Army history was made at Aldershot, England, when a young gunner in the Royal Artillery was let out of detention barracks to marry a Welsh miner's daughter. Two hours later he returned from the church to the barracks to complete his sentence for a military offence.

Never before had the army authorities released a soldier to enable him to be married. The authorities had been appealed to by a friend of the bride not to spoil the wedding plans, and it was only after much deliberation they agreed to allow the prisoner out for exactly two hours.

After the ceremony the smiling couple were allowed to spend 60 minutes together in the vestry, where a brief reception was held. Then the husband returned to detention and the bride to her place of occupation.

## Newspaper Advertising

Has Great Advantage Over Other Forms States Premier Fairbairn

"Newspaper advertising has tremendous advantages over other forms of advertising," Premier T. D. Pattullo stated in connection with the Dominion-wide advertisements with which British Columbia presented its case for a changed relationship between province and Dominion.

"A newspaper advertisement," said the premier, "possesses stability and permanence. It can be studied at leisure, analyzed, and followed up intelligently by discussion. The printed word can be a very well be comforted, and possibility of misconception is minimized.

"For public messages of importance that require careful study and cool analysis, nothing can supersede the press."

## THE RHYMING OPTIMIST

By Aline Michaelis

### YOUR IMMORTALITY

I do not hold your immortality Is but a memory dwelling in my thought. Although by night and day your face I see And know anew the joy your beauty brought. Nor could I be content, believing this That in so small a sphere your soul must dwell. For you should go, released to taste all bliss Through unknown regions, starred with asphodel. If you live only in my heart and mind, In my poor life, so warped by pain and woe, When I go, your magic then would find No other harbor in the universe! Your heritage or immortality Must be, past time and space, to wander free!

### Diamond Well Guarded

Jonker In Bullet Proof Case At American Museum

The \$1,000,000 Jonker diamond is on display at the American Museum of History, but none of the 4,000 persons who saw it the first day attempted to steal it.

The diamond is in a bullet-proof glass case. Should anyone touch the case, it would instantly vanish into a wall.

Guards who stood nearby practised sharpshooting before going on the job.

### Flea Did Not Work

A customs officer at Alexandria stopped two men carrying a sack of kitchen rubbish from a ship. Eighteen chickens' heads were in the bag. The officer opened the bird's head and out poured a quantity of opium—four each. The two men were arrested.

## DOUBLED UP WITH RHEUMATISM

Could Not Wash Himself Nor Brush His Hair

So bad was his rheumatism that his friends declared he would never work again. Although he is 70 years old, he proved they were wrong. Read what he says:— "I am seventy years of age. Last Christmas I was completely doubled up with rheumatism. I could not brush my hair nor wash myself. People said I should never work any more. I am working harder than a young man today. Thanks, many thanks, to Kruschen Salts. I take them in my tea, and I have recommended them to many. I could not get in or out of bed myself, nor sit up. But now I work now—12 hours sometimes. Kruschen Salts have done it for me."

Rheumatism conditions are the result of an excess of uric acid in the body. Two of the ingredients of Kruschen Salts have the power of dissolving uric acid crystals. Other ingredients assist Nature to expel these dissolved crystals through the natural channel. In addition, there are still other salts in Kruschen which assist in the removal of the intestines, and thereby check the further accumulation not only of uric acid, but of other body poisons which undermine the health.

## Little Helps For This Week

The ornament of a meek and quiet spirit which is in the sight of God of great price. 1 Peter 3:4.

Thy sinless mind in us reveal Thy spirit's plenteous impart; Till all thy spotless life shall tell The abundance of a loving heart. —Chas. Wesley

Holiness appears to be to make the soul like a garden of God with all manner of pleasant flowers, that is all pleasant, delightful and undisturbed; enjoying a sweet calm and the gentle fragrance of the beams of the sun. The soul of a true Christian appears to be a little white flower like we see in the spring of the year, low and humble on the ground, rejoicing as it were in a calm rapture, diffusing around a sweet fragrance, standing peacefully and lovingly in the midst of other flowers round about, all in like manner drinking in the beams of the sun.—Jonathan Edwards.

## New Soil Laboratory

Wind Tunnel Is To Be Constructed At Swift Current

Construction of a wind tunnel for conducting soil drift experiments at the Dominion farm in Swift Current, Sask., will be undertaken this year. Such equipment will be a part of a new soil laboratory to be erected at the farm at a total cost of some \$25,000 including equipment. It will be used to study the effect of wind currents on certain types of soil under different methods of cultivation in a similar manner to that employed by the research council in the study of aerodynamics, for testing new wing constructions.

## Forbid Hypnotism Shows

Roumanian Claims They Are Danger To Public Health

The Roumanian department of public health has issued a strict order prohibiting all hypnotism and telepathy public performances, as well as all moving pictures and plays dealing with these subjects. It is explained in the order that such performances present a great danger to public health and that numerous cases have recently been reported where people suffered serious nervous shocks by witnessing hypnotism and telepathy demonstrations.

## Town & District

Mrs. Patterson of Arrowwood who has been seriously ill is now much improved in health.

N. T. Purcell has returned from a trip to eastern Canada. He enjoyed the trip very much.

Monday the ball boys played in Tilley. The result of the game was a tie 6-6. Before the tie could be broken the game was called on account of the high wind which was blowing.

Monday, July 1st, was a very quiet day in town. The cold raw wind that blew all day interfered with several picnics.

The First Gleichen Ranger Group wish to thank all who helped make their strawberry festival, held on the beautiful lawn of Mrs. A. R. Yates a success.

Miss Louise Allotot has been quite ill during the past week. Her friends hope she will soon be up and around again.

In the beautiful setting of Mrs. A. R. Yates garden the Girl Guides held a starbush festival, Saturday afternoon. The girls report the event was a success in every way.

Friday afternoon there were many picnic parties at the river near the bridge. All of them were school picnics. Some of the parties came from as far away as Blackie and Vulcan.

While his family awaited, terror-stricken, the arrival of the police, Geo. Befus, a farmer residing twenty miles north-east of Gleichen committed suicide by hanging himself on the stairway of his home. Alexander Befus, a brother of the deceased, sent for the police when George Befus became violently insane and threatened to kill the members of his family. His wife and sons ran out of the house and when the police arrived Befus had taken his own life. The late George Befus had farmed in the district for 13 years. He leaves to mourn his loss his wife, three sons, a daughter and a brother.

There are several species of the caragana plant handy in Western Canada, but the one most commonly found and used very widely is the variety introduced from Siberia. The caragana is so hardy and vigorous, and adapts itself to such varied conditions of soil, that it must be considered a most valuable plant for field or garden shelter purposes.

Miss Dorothy Brown of Arrowwood is spending a few days in town visiting Miss Allison Evans.

A baseball tournament will be held at Meadowbrook on Wednesday, July 17. Four teams, Standard, Arrowwood, Strathmore and Gleichen will provide the entertainment. A big dance in the Meadowbrook hall that evening will wind up the day.

Mr. and Mrs. Birch and family and Max Yates spent Sunday and Monday at Rockyford taking in the ten-

nis tournament held there. It was M. Birch who started the tennis craze in Rockyford when he lived there several years ago.

Mrs. W. W. Brown of Lethbridge, spent the holiday in town renewing acquaintances. While here she was the guest of Mrs. R. C. McIntyre.

Sometimes a man puts his religion as well as his property, in his wife's name.

A professor declares that married men are smarter than single ones. But then they have to be.

A. C. Robertson, superintendent of the Gleichen Flour Mill has returned from a trip to the Pacific coast. His return brought much joy to the mill boys.

Mushrooms are to be found in abundance these days and many a home is enjoying big feeds.

Miss Isabella Bates of Kimberley, B. C., is spending her vacation here visiting her grand parents, Mr. and Mrs. T. W. Bates, also her uncle Thos Bates and family.

Saturday night rain fell in Gleichen for almost seven hours. The surrounding district also got a thorough soaking.

Mrs. J. Guttman and family of Calgary spent the weekend visiting Mr. Guttman.

The Call needs your cooperation. We want all the news we can get, but find it impossible to avoid missing things. We are pleased to receive local items and are just as anxious to mention your company or visits as we are your neighbors. If any of our readers know of a personal item, an accident, a marriage or a birth, that is of local interest, we will be very glad to publish same if handed to us personally, by mail or phone. If you are passing the office drop in with any items you may have. We cannot publish anonymous contributions. We must know who sends them in. Important late news will be welcome up till the last minute but other copy should reach us as early as possible.
